November 06, 2013

Contents

1	example_profile	3
2	tcas_profile	5
3	ua_profile	7
4	Indices and tables	9

'asias_fds_profiles' are a set of Python modules intended for use with Flight Data Services FlightDataAnalyzer.

Each module defines a themed set of measures, some of which correspond to ASIAs benchmarks.

As of Fall 2013, the profiles have been used in evaluation and testing against a limited set of test flights, and should not be regarded as fully mature.
